**Rimfire Pacific Mining** has reported the third-best drill result from its Sorpresa project in New South Wales.

The hole returned 9m at 18.15 grams per tonne gold and 100gpt silver from 18m.

**West African Resources** has released further high-grade results from its Tanlouka project in Burkina Faso.

Diamond drilling at M1 hit 14m at 4.5gpt gold, including 3m at 16.2gpt gold. The hole extended mineralisation down-dip and is likely to add to project resources.

Drilling at **Terrain Minerals'** Monet prospect, part of the Rembrandt project in Western Australia, has returned multiple high-grade results.

The best results from aircore drilling included 1m at 17.9gpt gold from 26m; 1m at 80.4gpt gold from 43m; 1m at 18.85gpt gold from 11m; 1m at 20gpt gold from 16m; and 1m at 10.3gpt gold from 28m.

Mineralisation remains open at depth.

Finally, **Axiom Mining** has released more results from resource definition drilling at its Isabel nickel project in the Solomon Islands.

New results included 13.6m at 1.62% nickel from surface, including 9m at 1.93% nickel; 11m at 1.92% nickel from surface, including 8m at 2.22% nickel; and 15m at 1.55% nickel from 1m, including 10m at 1.84% nickel.
